Systolic Blood Pressure and Cognitive Decline in Adults with Hypertension 100

In older patients treated for hypertension, systolic blood pressure less than 130 mm Hg is associated with additional cognitive decline.

Loneliness in Primary Care Patients 108

Approximately 20% of primary care patients report loneliness.

Trends in Providing Out-of-Office, Urgent After-Hours and On-Call Care in British Columbia 116

Primary care physicians in British Columbia are providing fewer out-of-office services despite financial incentives.

Training in Communication and CRP for Antibiotic Prescribing 125

Training in communication, but not in CRP testing, has sustained impact in reducing unnecessary antibiotics for respiratory tract infections.

Identifying Adverse Drug Events in Older Community-Dwelling Patients 133

Community dwelling older adults have difficulty identifying adverse drug reactions.

Visit Planning Using a Waiting Room Health IT Tool 141

A waiting room information technology tool improves visit communication, but does not reduce gaps in clinical care.

Primary Care Clinician Adherence to Specialist Advice in eConsult 150

In electronic consultations, primary care clinicians follow most clinical recommendations from specialty colleagues.

Loneliness in Primary Care and Geographic Characteristics 158

Patients who live in areas with higher unemployment, poor access to health care, lower income, and poor transportation report greater loneliness.

National Estimates of Screening and Counseling for Alcohol, Tobacco, and Obesity 161

There are significant gaps in delivery of USPSTF-recommended behavioral screening and counseling, particularly for alcohol misuse.

Accuracy of Signs and Symptoms for Diagnosis of Acute Rhinosinusitis 164

Three key clinical indicators are the best predictors of acute bacterial rhinosinusitis.

Sharing My Diagnosis: How Much is Too Much? 173

A physician and breast cancer survivor considers how much personal information to share with her patients.
