

## In this issue of the *Annals of Family Medicine*

### Health Behaviors of a Patient's Partner 290

*Partners of patients with diabetes are more likely to adopt healthy behaviors than partners of people without the disease.*

### Alcohol Consumption and Nocturnal Leg Cramps 296

*Consumption of alcohol is strongly associated with nocturnal leg cramps.*

### Community College Pathways to Medical School and Residency Training 302

*Medical school graduates who attended community college are more likely to train in family medicine.*

### Implications of Team Documentation 308

*A capitated payment environment may better contribute to the financial viability and benefits of team documentation.*

### Booklet for Childhood Fever and Infections in Out-of-Hours Primary Care 314

*Antibiotic prescribing rates are not affected by physician access to a booklet for parents on children's fever, but do decrease when physicians use the booklet.*

### Predicting Incident Multimorbidity 322

*Incident multimorbidity is independently predicted by age, socioeconomic status, obesity, physical activity level, and locus of control.*

### Evaluation of Physicians' Communication Skills From Multiple Perspectives 330

*Family physicians differ from patients and trained clinical raters in perceptions of patient-physician communication.*

### Mental Health Apps 338

*Mental health apps may medicalize normal mental states and imply that mental health problems are easily managed.*

### Patients' Perceptions of Access to Primary Care Notes 343

*Patients with and without mental health diagnoses have similar perceptions of online access to primary care clinic notes.*

### Warm Handoffs and Intake Attendance 346

*Warm handoffs are not associated with improved attendance at behavioral health intake appointments.*

### Physicians' Views of Self-Monitoring of Blood Glucose in Type 2 Diabetes Patients 349

*Despite its ineffectiveness in lowering HbA<sub>1c</sub>, physicians recommend self-monitoring of blood glucose to promote lifestyle change for glycemic control.*

### Solving the Diagnostic Challenge: A Patient-Centered Approach 353

*Effective diagnosis in primary care starts, not with hypothesis testing, but with carefully listening to the patient.*

### Continuity and Access in the Era of Part-Time Practice 359

*In part-time practice, practice strategies can optimize continuity and access and deepen patient-physician relationships.*

### They Didn't Believe Her Pain 361

*A medical student learns that caring for patients with a history of interpersonal violence begins with believing their pain.*

### On Blindness and Blind Spots 364

*A physician finds that persistence, trust, and following her patient's lead are key to treating conversion disorder.*
