Acknowledgements: The authors would like to thank Dr. Rafael Tun, the medical director for the community health worker program, for his work in helping to develop clinical protocols and program workflows, as well as his care for patients referred by the health workers. The health workers themselves - particularly Jose Vicente Macario, Cesia Castro Chutá, Olga Marina Ajcalon Cuc, and Dominga Pic Salazar - have been instrumental in all phases of this project, which would be impossible without their hard work and dedication to patient care. Dr. David Rabago provided guidance on this project and helped to frame and edit this manuscript.

This project was funded by a grant from the University of Wisconsin-Madison Global Health Institute. Dr. Duffy was also supported by the NRSA Primary Care Postdoctoral Research Traineeship awarded by the NIH Health Resources Services Administration (HRSA grant T32 HP10010) during a portion of the time spent working on this project.

The University of Wisconsin and Stanford University IRBs reviewed and approved this project.
