Peritonsillar Abscesses and Antibiotic Prescribing 390

New research finds that peritonsillar abscess is most frequent in young adults, but risk is quite low, whether antibiotics are prescribed or not.

Care Practices to Promote Patient Engagement 397

In this cross-sectional survey of direct-care providers in VA primary care, several structural and organizational attributes of clinics were significantly associated with high performance of patient engagement strategies in care.

After-Hours Primary Care and Same-Day ED Use 406

Better access to after-hours primary care reduced the risk of an ED visit following a home nursing visit.

Implementation of Mifepristone in Canada 413

Regulatory changes made Canada the first nation to effectively enable medical abortion primary care access through evidence-based deregulation of mifepristone.

Primary Care Relationships and Functional Health Outcomes 422

The authors examine the longitudinal impact of changes in the physician-patient relationship on functional health.

Trends and Out-of-Pocket Expenditures for Visits to Primary Care Physicians 430

Total expenditure per visit increased for private insurance, Medicare (but not Medicaid), and for out-of-pocket, suggesting increasing difficulty with primary care physician access, particularly for Medicaid patients.

Telepsychiatric Consultation and Rural Health Care 438

Telepsychiatric consultation serves not only as a model for patient care but also as a training and workforce development strategy in rural primary care.

Access to Obstetrical Care in Rural Alabama 446

Access to local obstetrical care in a rural area is associated with better infant outcomes.

Synthetic Levothyroxone vs Desiccated Thyroid 452

This longitudinal study showed no difference in TSH stability between desiccated thyroid products and synthetic levothyroxine.

Chronic Care Management Among Primary Care Clinicians 455

Primary care clinicians drove increasing use of Medicare's CCM codes over time, however, the combination of payment denials, large number of eligible beneficiaries, and limited number of clinicians currently delivering these services underscores the need to evaluate facilitators and barriers to CCM use.

Immigrant Health & Public-Charge Rule 458

A summary of recent changes to the US government's Public-Charge rule and what family physicians can do to promote the health of immigrant patients and their families.

Connecting While Out of Touch 461

In this essay, two family physicians, one in Canada, one in the UK, share their experiences consulting virtually and how the loss of touch impacts their ability to connect with patients.
