

**CORRECTION**

In the November/December 2005 print issue of the *Annals*, a printing problem occurred in which letters were missing from the caption in Figure 2 in the article by Elder et al (Elder NC, Jacobson J, Zink T, Hasse L. How experiencing preventable medical problems changes patients' interactions with primary health care. *Ann Fam Med*. 2005;3:529-536). The complete figure is reprinted below. Please also refer to the *Annals* online at <http://www.annfammed.org>, where this figure appears correctly in the full-text and PDF versions of the article.

*Ann Fam Med* 2006;4:84. DOI: 10.1370/afm.507.

**Figure 2. Model of behavioral responses relating to trust.**

A proposed model of patients' behavioral responses relating to trust in the health care system. Those who describe avoidance or advocacy behaviors after experiencing preventable problems were more likely to express loss of trust in aspects of health care.
