Colorectal Cancer Screening Disparities 204

An individually tailored intervention based on health belief model concepts failed to enhance uptake of colorectal cancer screening in a multiethnic sample.

US Cardiovascular Risk and Statin Use 215

A large population-based study supports the need for a new approach to prescription of statins, as recommended in recent guidelines.

Medication Taking in Coronary Artery Disease 224

Patients with coronary artery disease undergo a complex decision-making process when deciding whether to persist with their medications.

Implementing Asthma Guidelines 233

In a trial of adherence to asthma care guidelines, the addition of practice facilitation improved adherence for 2 of 6 guidelines.

Family History Screening Questionnaire 241

A patient-completed family history questionnaire to screen for risk of adult-onset diseases was validated by comparison with a genetic counselor's family history assessment.

Future Role of US Family Physician 250

Representatives from 7 family medicine organizations propose a statement defining the role to which family physicians aspire.

Treating Multiple Chronic Conditions 256

Recent policy work by the US Department of Health and Human Services and the Institute of Medicine addresses guidelines for people with multiple chronic conditions.

Context in Multiple Chronic Conditions Research 260

A group of key stakeholders define 4 critical areas in research aimed at improving health for persons with multiple chronic conditions.

Shared Decision Making and Motivational Interviewing 270

Motivational interviewing and shared decision making, individually and together, can help facilitate patient-centered care.

Caring for Patient and Family 276

A series of house calls teaches a young family physician that caring for a dying patient includes caring for family.
