

In this issue of the *Annals of Family Medicine*

CVD Risk and Prior Pregnancy Loss 302

A history of miscarriage is an independent risk factor for incident coronary artery disease in postmenopausal women.

Adolescent All-Terrain Vehicle Experience 310

A high proportion of students report being exposed to ATVs, practicing unsafe riding behaviors, and experiencing at least one crash.

Pay-for-Performance Cancer Screening 317

In Ontario primary care practices, financial incentives for cancer screening have small effects on screening rates despite large program expenditures

Shared Medical Appointments and Patient Satisfaction 324

Patients who participate in group visits are more satisfied with their overall care but less satisfied with their relationship with their usual care clinician.

Practice Environments and Job Satisfaction in PCMHs 331

Medical home transformations that emphasize quality and open communication while minimizing office chaos may offer the best chances of improving job satisfaction.

Electronic Messaging and Telephone Encounters in the PCMH 338

Secure messaging and telephone visits are associated with additional outpatient visits among people with diabetes.

EHRs for Intervention Research 344

Cluster randomized trials can be conducted remotely through electronic health records but, in this study, use of the intervention and its effect on care were both low.

Identifying Undiagnosed Hypertension 352

The diagnosis of hypertension can be improved by feedback from computer algorithms in the electronic medical record and automated blood pressure protocols.

An International Register of Clinical Prediction Rules 359

This study summarizes clinical prediction rules relevant for primary care and assesses their quality.

Chronic Disease Surveillance Case Definitions 367

Valid diagnostic algorithms can be used to identify chronic conditions from electronic health record data for both research and public health purposes.

The Immortality of Ms Jones 373

For a medical student, the ability to care creates new-found confidence.
