Inequities in Ambulatory Care 402

In a setting with universal health care, disparities in hospitalizations for asthma and COPD are not explained by differences in the quality of primary care.

Cost, Utilization, and Quality of Care 408

A primary care case management program for Medicaid patients in Illinois is associated with improved quality measures and reduced costs.

Patient-Centered Personal Health Record Use 418

Practice-based patient engagement strategies increase patients' uptake of electronic portals to personal health records.

Family Physicians' Care for Children 427

With fewer family physicians providing care to children, researchers explore demographic characteristics of family physicians providing pediatric care.

Standardized Shoe Advice for Older Patients 432

In carefully selected older patients with forefoot pain, treatment with a bandout emphasizing proper shoes is equally effective to referral to a podiatrist.

Family Physicians' Diverse Roles at End of Life 441

Family physicians' roles in both guiding and preventing hospital admissions at the end of life include planning care, providing care and support, and initiating and making decisions.

Conducting Relevant Research in a Changing World 447

An evolving paradigm for health care delivery research is proposed to maximize value to both users and beneficiaries of the research.

Case Management for Patients With Dementia 456

High intensity of case management and effective communication among health care professionals is associated with positive clinical outcomes and optimized health service use in dementia patients.

Bronx Voter Registration Project 466

A successful voter registration project at 2 federally qualified health centers demonstrates power of health centers to give voice to disenfranchised communities.

Cardiac Care in the United States and India 470

A researcher learns first-hand that, in the United States, lack of transparency about health care costs is a barrier to informed decision making.

Lessons From a Spanish-Language Clinic 473

All physicians are interpreters who must forge a common language with patients of different backgrounds.

Defensive Medicine 475

After being sued for malpractice, a family doctor struggles to put the needs of patients first.
