Parent Tensions About Child Mobile Technology Use  503
Clinicians can help parents make informed and empowered decisions about young children’s use of digital media.

How Health Coaches Support Patient Decision Making  509
A strong coach-patient relationship is the basis for effective health coaching, according to a new conceptual model.

Those Left Behind in Medical Home Reforms  517
In Ontario, patients who do not participate in medical home reforms include the most vulnerable populations.

Subclinical Peroneal Neuropathy and Falls  526
Falls associated with a common peripheral neuropathy may be identified and managed in the primary care setting.

Lower Respiratory Tract Infection With Bacterial Etiology  534
There are minimal differences in the natural history of bacterial vs nonbacterial lower respiratory tract infection.

Peer-Support For Diabetes: Hemoglobin A1c Outcomes  540
Peer coaching for patients with diabetes modestly reduces glycosylated hemoglobin among black and Hispanic patients, but not non-Hispanic whites.

Pathogens in Cough and Pneumonia  552
Atypical bacterial pathogens appear to be relatively common causes of cough, bronchitis, and community-acquired pneumonia.

Atypical Pathogens in Patients With Sore Throat  567
Group C streptococcus and Fusobacterium necrophorum are commonly detected in patients with acute pharyngitis.

Discussing Opioid Risks With Patients  575
Discussing risks of prescription painkiller addiction may lower the risk of abuse.

Burnout as Zombie Apocalypse  578
Cultivating core principles and a sense of purpose could help physicians avoid their own zombie apocalypse.
