

In this issue of the *Annals of Family Medicine*

Clinical Preventive Service Priorities 14

Childhood immunizations and tobacco prevention/intervention are highest priority preventive services, based on health impact and cost-effectiveness.

Impact of Cardiovascular Disease Preventive Services 23

A simulation analysis finds that hypertension and lipid screening produce the highest benefits in preventing cardiovascular disease.

Brief Clinician Tobacco Counseling 37

Tobacco counseling for youth and adults is underused, despite large benefits in quality-adjusted life years and cost savings for society.

Interventions for Cancer Screening Decision Making 48

A video-based decision aid helps patients consider and trust USPSTF screening recommendations.

Health Information Technology Use in Small Practices 56

Use of health information technology in small US practices has increased, but smaller and independent practices may still require assistance in adoption.

Regional Variation in Primary Care at the End of Life 63

Hospital referral regions with greater primary care involvement in end-of-life care have lower intensity and lower-cost care.

Breastfeeding Mothers' Preferences for Vitamin D 68

Breastfeeding mothers prefer to supplement themselves, rather than their babies, with Vitamin D.

Measuring Outcomes: Lessons From Public Education 71

Unintended consequences of performance management in public education and health care can include narrowing of purpose, deprofessionalization, and loss of local control.

Silent Survivors 77

A physician reflects on the experience of sexual violence from her perspectives as a clinician and a survivor.

Neuroscience, Joy, and a Well-Infant Visit 80

A routine visit leads a family physician to explore the bond that unites mother and infant and facilitates early brain development.
