

In this issue of the *Annals of Family Medicine*

A Nationwide Flash-Mob Study for Suspected Acute Coronary Syndrome 296

A flash-mob study finds that, in emergency care, acute coronary syndrome cannot be safely ruled out using the Marburg Heart Score or FP clinical assessment.

Family Physicians' Experiences of Physical Examination 304

Family physicians experience physical examination as an integral part of being a good doctor.

Clinician Empathy and Risk of Cardiovascular Events and Mortality in Diabetes Patients 311

Diabetes patients experiencing empathy from their primary care practitioners have lower risk of mortality.

Team-Based Opioid Management: Impact on Opioid Prescribing 319

In rural practice, system redesign results in declines in the proportion of patients on high dose opioids and the number of patients receiving opioids.

A Structured Approach to Detecting and Treating Depression in Primary Care 326

A questionnaire-based management algorithm for major depressive disorder in primary care is feasible to implement but attrition from treatment is high.

Following Uninsured Patients Through Medicaid Expansion: Utilization and Conditions 336

In community health centers in Medicaid expansion states, a sizable proportion of established patients remained uninsured after implementation of the Affordable Care Act.

Family Physician Perceptions of Their Role in Managing the Opioid Crisis 345

Physicians struggle to balance external and system pressures and patient expectations in opioid prescribing.

Metformin Initiation and Incident Dementia in African American and White VA Patients 352

Metformin use is associated with a reduced risk of incident dementia in younger African American veterans, compared to white veterans.

Medicaid Beneficiaries' Appointments With Advanced Practitioners, 2012 to 2016 363

Between 2012 and 2016, the proportion of primary care appointments scheduled with advanced practitioners increased across a sample of ten states.

Powering-Up Primary Care Teams: Advanced Team Care With In-Room Support 367

Advanced team care with in-room support is promising, but adoption requires a willingness to truly share the care.
