

In this supplemental issue of the *Annals of Family Medicine*

Trends in Burnout During Primary Care Transformation S9

Practice transformation is a stressful time for practices and how team members experience burnout may differ.

Clinicians' Perceptions of Practice Facilitation S17

Facilitation helps small practices understand external requirements, transfer learning, and turn data into information.

The University of Colorado's Primary Care Redesign Model S24

A primary care redesign model is associated with improvements in quality, access, and clinician experience, while maintaining staffing costs.

Remote Support for Practice Transformation S33

Technical assistance to promote practice transformation can be provided remotely and at scale at low per-practice cost.

External Practice Support to Improve Cardiovascular Risk Factors S40

Adding educational outreach visits and shared learning may enhance a practice's capacity to improve its performance.

Differences in Team Mental Models and Medical Home Transformation Success S50

In early medical home adopters and majority practices, there is a range of mental models and differences in distribution of team macrocognitive functions.

Using Telemedicine to Connect S57

A virtual team-based model using telemedicine for people with multimorbidity effectively addresses the needs of complex patients and their primary care clinicians.

Overestimating Geographic Service Areas S63

In a study of clinicians and administrators, most overestimated their practice's service area.

Lessons From 5 Case Studies S67

Health extension for practice change should value coalition-building and broad ownership and link creatively with funding sources that benefit from upstream investments.

Tools to Engage Practices S73

Visual displays of practice transformation analytics data in dashboards can engage practices in transformation and patient-centered value-based care delivery.

Supporting Physicians and Practice Teams in the Opioid Epidemic S77

Regional Health Improvement Collaboratives can support physicians and practice teams in addressing opioid use disorder.
