Lay Health Coaching to Increase Appropriate Inhaler Use in COPD 5

Lay health coaching improves adherence to controller inhalers among low-income primary care patients with COPD.

Peer Behavioral Training to Reduce Pain as a Barrier to Exercise in Diabetes Patients 15

In adults with diabetes and chronic pain, a peer behavioral intervention improves functioning, pain, quality of life, and physical activity.

Patient Experience in Hospital-Based and Community Practice in Japan 24

Primary care patients in Japan experience better first contact and worse community orientation in hospital-based practices compared with community practices.

Perspectives on Missed Well-Child Visits 30

Both caregivers and clinicians highlight social factors as primary barriers to timely well-child care.

Patients Assess an eConsult Model 35

Primary care patients expressed strong support for eConsult, particularly when used by a trusted primary care physician, in addition to voicing several concerns.

Warfarin Administration Time and Anticoagulation Stability 42

Time of day at which Warfarin is taken does not appear to be clinically important.

Home vs Clinic Blood Pressure Monitoring and Doctors' Decision to Treat 50

By examining the association between high office BP and home BP measurement, the authors find that inaction on the part of physicians is often justified given normal home BP measurements.

Cancer Screening Among Women Prescribed Opioids 59

US women who take prescription opioids are no less likely to receive key cancer screenings when compared with women who are not prescribed opioids.

PCMH Differences in Diabetes Care 66

Although practices certified as medical homes have more practice systems and higher performance for diabetes care than uncertified practices, there is extensive overlap and any differences may reflect self-selection for certification.

A Blueprint for Planning and Implementing a Transgender Health Program 73

Leading experts on transgender health care provide a concise and practical guide to developing transgender health programs within existing primary care practices.

A Patient-Doctor Healing Journey 80

When a patient of 20 years reveals her story, her family physician learns that "the truth has a pace of its own."
