

## In this issue of the *Annals of Family Medicine*

### Transforming LGBT Care 292

*This report—describing the first national quality improvement collaborative focused on providing culturally affirming care for LGBT people—finds that making primary care practices more LGBT-friendly and inclusive can improve STD and HIV screening rates among this vulnerable population.*

### Identification of Intimate Partner Violence Among Young Men 303

*In the US among young men, 9/10 support health care providers asking about IPV, 1/5 report perpetrating or being a victim of IPV, but only 1/10 report being asked by a health care provider about IPV.*

### Comprehensive Primary Care Plus Initiative 309

*Primary care practices that participated in the Comprehensive Primary Care Plus initiative are diverse, but less likely to be small, independent, located in rural areas, and inexperienced with primary care transformation models—underscoring the need for additional engagement strategies and to extrapolate evaluation results carefully.*

### County-Level CVD Burden Assessment Tool 318

*A novel social determinants of health tool has been developed and validated, and has the potential to improve population health assessment for cardiovascular diseases (CVD) mortality.*

### Inaccurately Recorded Antibiotic Allergies 326

*Technological and communication barriers and a lack of knowledge and facilitating tools are main causes for numerous inaccurately registered antibiotic allergies and are therefore targets for future improvement.*

### Machine Learning for Primary Care and Workforce Research 334

*Using prescription and procedure data from Medicare, a machine learning model provides a near real-time method for identifying physicians practicing primary care.*

### Trends in Gender Ratio of Authorship 341

*Researchers at the Robert Graham Center developed a methodology to assess the gender ratio of authorship of peer-reviewed papers and applied these methods to their own center, finding that a gender gap in the ratio of female to male authorship exists.*

### Zolpidem Restriction and Hypnotic Use in France 345

*In France, implementation of the requirement that zolpidem be prescribed using secured forms led to an important and immediate decrease in zolpidem use, which was partially compensated by a rise in zopiclone use.*

### Redesigning Primary Care to Address COVID-19 349

*The authors present a roadmap for necessary primary care practice transformations to care for patients and communities during a pandemic, using the current COVID-19 pandemic as an example.*
