

presentation at the ADFM Annual Conference. The LEADS fellowship team prioritizes being responsive to current events in its weekly meetings and is always looking for opportunities to further its purpose, for example, recently offering a webinar in partnership with Witt Kieffer in hopes of demystifying the executive search process.

Since 2009, over 120 fellows have completed or are currently participating in the fellowship. Its longitudinal outcomes to date are robust; almost one-half of those who have graduated from the fellowship have assumed interim or permanent chair positions, and others have gone on to assume department-level senior leadership roles in academic family medicine. In order to recognize the changing role of senior leaders in family medicine, ADFM has expanded the focus of the fellowship to include Department Administrators and other health system leaders. The [LEADS call for applications](#) runs from February to June.

BRC (Building Research Capacity) Fellowship

This program focuses on another aspect that family medicine is looking for opportunities to strengthen frequently: building research capacity (BRC). BRC is a joint initiative between ADFM and NAPCRG that launched at the 2016 NAPCRG Annual Meeting.⁶ The initiative features multiple activities, including the BRC Fellowship. Now hosting its fourth cohort of fellows, the program has 3 aims:

- Coaching: Provide coaching support to build research and scholarship capacity within a program or institution
- Support: Develop a peer support/network among other individuals or teams trying to build research capacity
- Strategic Planning: Create a strategic plan for research and scholarship within their home program/institution

Throughout the fellowship year, participants engage with one another and program faculty in monthly meetings while developing a strategic plan for their own institution, which they present at the following NAPCRG Annual

Meeting under the title "SPARC: Strategic Plans to Advance Research Capacity."

In the evaluation of the 2023-2024 cohort experience, fellows shared that the systematic evaluations that are part of the fellowship curriculum led to changes such as increased coaching, monthly scholarly teaching, and half-day trainings within their home institutions. For example, one participant shared, "The fellowship and my organization's interest in building research capacity have complemented each other perfectly and their alignment provides strength to effect change and improvements. The timing of the fellowship has felt like a real asset and catalyst to change/improvement at my organization thus far." As the fellowship continues, the BRC Steering Committee plans to analyze fellows' longitudinal impacts, including tracking progress in implementing their strategic plans. The [BRC call for applications](#) runs from April to July.
