<b>arriba</b>		<b>Absolute and Relative Risk Reduction in General Practice</b>	<b>Men</b>
<b>1</b>	<b>Agreement:</b> determine patient's individual risk for myocardial infarction or stroke, involve the patient in choosing options for risk reduction		
<b>2</b>	<b>Risk subjective:</b> address patient's fears, expectations, preferences, questions		
<b>3.1</b>	<b>Risk objective:</b> calculate risk and total points		

**If manifest atherosclerosis (ie, MI, stroke, PAD)**  
→ **high risk (~ 50% in 10 years). Continue with 3.3**

Age (years)	20-34	35-39	40-44	45-49	50-54	55-59	60-64	65-69	70-74	75-79	
<b>Basal risk age</b>	-9	-4	0	3	6	8	10	11	12	13	
<b>Smoker - yes</b>	8		5		3		1		1		
<b>Total Cholesterol (mmol/L)</b>	<4.1	0	0	0	0	0	0	0	0	0	
	4.2 – 5.1	4	3	3	2	1	1	0	0	0	
	5.2 – 6.1	7	5	5	3	1	1	0	0	0	
	6.2 – 7.1	9	6	6	4	2	2	1	1	1	
	7.2 – 8.4	11	8	8	5	3	3	3	1	1	
>8.5	<b>Familial hyperlipidamia probable</b>										
<b>HDL - Cholesterol (mmol/L)</b>	>1.5		1.3-1.4			1.1-1.2		<1.0			
	-1		0			1		2			
<b>Blood pressure systolic (mm Hg)</b>	<120		120 - 129		130 - 139		140 - 159		160 - 179		≥180
<b>Without antihypertensives</b>	0	0	1	1	2	2	3	<b>Lowering of blood pressure recommended</b>			
<b>With antihypertensives</b>	0	1	2	2	3	3	3				

**3.2 Risk objective:** Compare total risk with population

**Additional risks:**

- **Family history**  
If manifest CVD in first-grade relatives (women under 65 y, men under 55 y): => risk x 1.5
- **Diabetes** (if known):  
HbA<sub>1c</sub> <6: risk normal  
HbA<sub>1c</sub> 6.1-8: risk x 1.2  
HbA<sub>1c</sub> 8.1-10: risk x 1.6

arriba <sup>®</sup>	Name: _____ Date: _____ Physician: _____	Counseling sheet
---------------------	---	------------------

**3.3 Risk objective: Illustration of probability**

Picture 100 people with the same point values as yours. Out of these, in the next 10 years ..... will suffer from or even die due to a heart attack or a stroke; ..... will stay healthy.

If the same 100 people take the same preventive measures over the next 10 years, ..... will not be affected; despite preventive measures ..... will sicken or die.

<b>Risk points:</b>		
Age:		
Smoking:		
Total Cholesterol (mmol/l):		
HDL-Cholesterol (mmol/l):		
Blood pressure (syst.):		
<b>Total:</b>		
<b>Additional risks</b> (family history, diabetes – see decision aid part 1)		
		
<b>10 year risk:</b>		
		
		

**4 Information about options (Prevention)**

Preventive measures	Relative risk reduction	Individual plan
Smoking cessation	Approx. 35%	
Exercise 2-3x per week > 30 minutes	Approx. 35%	
Fish 2x per week or Omega-3 fatty acids	Approx. 15%	
Antihypertensive drugs	Approx. 25%	
Aspirin 100mg per day	Approx. 20%	
Statin	Approx. 20-25%	

**5 Both physician and patient evaluate together options for risk reduction: alternatives, advantages, disadvantages**

**6 Agreement between physician and patient regarding treatment: i.e. behavior modification, medication and follow up**

**Date of follow up?**
