

## **Online Supplementary Material**

Karaca N, Dereli T. Treatment of ingrown toenail with proximolateral matrix partial excision and matrix phenolization. *Ann Fam Med.* 2012;10(6):556-559.

http://www.annfammed.org/content/full/10/6/556

Supplemental Figure 1. After disinfection with povidone-iodine solution, digital anesthesia was administered with lidocaine hydrochloride 20 mg/mL and epinephrine hydrochloride 0.0125 mg/mL.

http://www.annfammed.org//content/10/6/556/suppl/DC1

Supplemental Figure 2. After removing the nail and the matrix with straight hemostatic forceps (Klemmer or Kelly), we ensured that all matrix over the distal phalanx was cleaned up by using a curette.

http://www.annfammed.org//content/10/6/556/suppl/DC1

Supplemental Figure 3. We massaged the matrix vigorously with a cotton-tipped swab dipped in an aqueous solution of phenol 88%, with a rotation directed toward the lateral fold.
