Supplemental Figures 1-3 for:

Lanoue M, Mills G, Cunningham A, Sharbaugh A. Concept mapping as a method to engage patients in clinical quality improvement. *Ann Fam Med.* 2016;14(4):370-376.

Note: Each numbered point represents 1 of the 101 practice improvement ideas identified by concept mapping study participants. Each labeled polygon contains a domain of conceptually similar practice improvement ideas.

97. Patients could participate in creating an action plan for improving their healthcare 41. Utilize practice resources like diabetes education, smoking cessation program, breast feeding education, and pharmacists 77. Have a method to help patients track their progress in managing their chronic diseases 49. Improve health literacy 59. Patients should vocalize their problems, concerns about their care 100. Access texting program to help remind patients regarding appointments, studies, medication adherence, referrals

Note: Example of a go-zone diagram: the green quadrant contains statements rated as having high impact by both patients and providers.

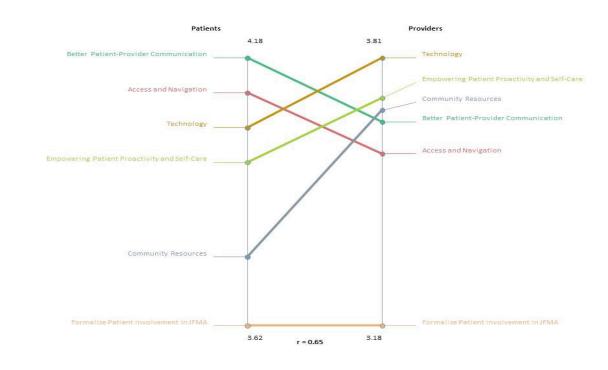

Figure 3. Pattern match: impact ratings of patients and providers.

Note: The pattern match between patients and providers for impact ratings.
